Computing the SVD/eigendecomposition

- Efficient algorithms for SVD/eigendecomposition.
- High level: a glimpse into fast methods for linear algebraic computation, which are workhorses behind data science.

We have talked about the eigendecomposition and SVD as ways to compress data, to embed entities like words and documents, to compress/cluster non-linearly separable data.

How efficient are these techniques? Can they be run on massive datasets?

Power Method: The most fundamental iterative method for approximate SVD/eigendecomposition. Applies to computing $k = 1$ eigenvectors, but can be generalized to larger k.

Goal: Given symmetric $\mathbf{A} \in \mathbb{R}^{d \times d}$, with eigendecomposition $\mathbf{A} = \mathbf{V}\mathbf{\Lambda}\mathbf{V}^T$, find $\vec{z}$ which is an approximation to the top eigenvector $\vec{v}_1$ of $\mathbf{A}$.

- **Initialize:** Choose $\vec{z}^{(0)}$ randomly. E.g. $\vec{z}^{(0)}(i) \sim \mathcal{N}(0, 1)$.
- For $i = 1, \ldots, t$
  - $\vec{z}^{(i)} := \mathbf{A} \cdot \vec{z}^{(i-1)}$
  - $\vec{z}_i := \frac{\vec{z}^{(i)}}{\|\vec{z}^{(i)}\|_2}$

POWER METHOD ANALYSIS

Write $\vec{z}^{(0)}$ in $\mathbf{A}$'s eigenvector basis:

$$\vec{z}^{(0)} = c_1 \vec{v}_1 + c_2 \vec{v}_2 + \ldots + c_d \vec{v}_d.$$

$\mathbf{A} \in \mathbb{R}^{d \times d}$: input matrix with eigendecomposition $\mathbf{A} = \mathbf{V \Lambda V}^T$. $\vec{v}_1$: top eigenvector, being computed, $\vec{z}^{(i)}$: iterate at step i, converging to $\vec{v}_1$.

Write $\vec{z}^{(0)}$ in $\mathbf{A}$'s eigenvector basis:

$$\vec{z}^{(0)} = c_1\vec{v}_1 + c_2\vec{v}_2 + \ldots + c_d\vec{v}_d.$$

Update step: $\vec{z}^{(i)} = \mathbf{A} \cdot \vec{z}^{(i-1)} = \mathbf{V}\mathbf{\Lambda}\mathbf{V}^T \cdot \vec{z}^{(i-1)}$ (then normalize)

$$\mathbf{V}^T\vec{z}^{(0)} =$$

FINDING SECOND (ETC.) EIGENVECTOR

- If A has eigenvectors $v_1, \ldots, v_n$ with eigenvalues $\lambda_1, \ldots, \lambda_n$ $(|\lambda_1| \geq \ldots \geq |\lambda_n|)$ then

$$B = A - \lambda_1 v_1 v_1^T$$

  has eigenvectors $v_2, \ldots, v_n, v_1$ with eigenvectors $\lambda_2, \ldots, \lambda_n, 0$

- Hence, to find the second eigenvector of A, just apply the previous method to B.
